

“Our eye need only become a bit sharper, our ear a bit more receptive; we need to take in the taste of a piece of fruit more fully.” — *Blossfeldt*

Karl Blossfeldt (1865–1932) is considered a pioneer of the New Objectivity in the history of photography. His oeuvre consists of some 6,000 photographs of plants and plant segments that have survived as negatives and in contemporary publications. In addition, another 500 authorized contemporary prints were found in the archive of the Hochschule der Künste in Berlin in 1984. These so-called “vintage prints” were believed to have been lost and belonged — along with three-dimensional models — to Blossfeldt’s instructional materials.

As a sculptor and university teacher, he first taught “modeling based on living plants” at the old Kunstgewerbemuseum in the Gropius Building, then at the Berliner Vereinigten Staatsschulen, the present Hochschule der Künste. He achieved photo-historical fame somewhat innocently and almost unknowingly; for it was not until 1928, shortly before the end of his life, that his *Urformen der Kunst* appeared.

INTRODUCTION

As a sculptor and university teacher, he first taught “modeling based on living plants” at the old Kunstgewerbemuseum in the Gropius Building, then at the Berliner Staatsschulen, the present Hochschule der Künste. He achieved photo-historical fame somewhat innocently and almost unknowingly; for it was not until 1928, shortly before the end of his life, that his *Urformen der Kunst* appeared. Published with primarily didactic rather than artistic intentions by the Wasmuth Verlag in Berlin, the book made him famous overnight. Blossfeldt surely could not have believed his eyes as he read the reviews.

It is indeed true that Blossfeldt demonstrated little interest in root systems; and in accordance with the classical premises of his aesthetics and their origins in Meurer’s teaching materials, they could hardly have interested him.

Chapter 1
BEGINNINGS

Karl Blossfeldt (1865–1932) is considered a pioneer of the New Objectivity in the history of photography. His oeuvre consists of some 6,000 photographs of plants and plant segments that have survived as negatives and in contemporary publications. In addition, another 500 authorized contemporary prints were found in the archive of the Hochschule der Kunst in Berlin in 1984. These so-called “vintage prints” were believed to have been lost and belonged—along with three-dimensional models—to Blossfeldt’s instructional materials.

As a sculptor and university teacher, he first taught “modeling based on living plants” at the old Kunstgewerbemuseum in the Gropius Building, then at the Berliner Vereinigten Staatsschulen, the present Hochschule der Kunst. He achieved photo-historical fame somewhat innocently and almost unknowingly; for it was not until 1928, shortly before the end of his life, that his *Urformen der Kunst* appeared.

Published with primarily didactic rather than artistic intentions by the Wasmuth Verlag in Berlin, the book made him famous overnight. Blossfeldt surely could not have believed his eyes as he read the reviews.

It is indeed true that Blossfeldt demonstrated little interest in root systems; and in accordance with the classical premises of his aesthetics and their origins in Meurer’s teaching materials, they could hardly have interested him. The amputation that Kubicki criticizes is therefore not an act of random pruning, but rather an aesthetic decision based on principle. Just as the bestial aspect of vegetal functions remains secondary to him, the chaotic subterranean life of tubers is no subject for his photos. It is practically impossible to stylize it.

Unknown Universe

The projection of vegetal life into technical forms follows the ritual of a magical spell. Objects, alienated and increasingly threatening in their rigid power since Goethe's day, are fixated—and held by the eye of the camera—until their rigidity seems to dissolve into familiar forms. That is one version; the other interpretation is that the viewer, haunted by technology, capitulates and changes sides. In the mimicry of a humble glance backwards, he believes to recognize that the new forces were already at work in the old vegetal forms archaic ornamental elements. The feelings that accompany these glimpses vary, depending upon what predominates—the hubris of the spell-binding gaze or the humility of transformation.

The decisive factor is to be found elsewhere however. Everything is dependent upon the viewer, not the object viewed. Just how threatening things appear depends upon the capacity and suitability of his

optics. With this idealistic premise, the “new way of seeing” braces itself against the experience of subjective impotence in the face of the technical and as is increasingly the case in our century, ideological powers that are so overwhelming. It is feared that the things themselves cannot be changed; relief, and above all consolation, must therefore be sought in a change of perception:

Our eye need only become a bit sharper, our ear a bit more receptive; we need to take in the taste of a piece of fruit more fully; we should be able to tolerate more odors and become more conscious and less forgetful when touching and being touched—in order to draw consolation from our immediate experiences which would be more convincing, more paramount, and truer than all the suffering that could ever torment us.

This wrote Rilke to Princess Marie von Thurn und Taxis Hohenlohe after a year of world war (September 6, 1915). Tragedy and calamity are to be offset by an exertion of the senses, a sensibility devoid of personal interest. The personal aspect must recede so that the essence of things may unfold within the observer.

Karl Blossfeldt (1865–1932) is considered a pioneer of the New Objectivity in the history of photography. His oeuvre consists of some 6,000 photographs of plants and plant segments that have survived as negatives and in contemporary publications. In addition, another 500 authorized contemporary prints were found in the archive of the Hochschule der Kunste in Berlin in 1984. These so-called “vintage prints” were believed to have been lost and belonged—along with three-dimensional models—to Blossfeldt's instructional materials.

As a sculptor and university teacher, he first taught “modeling based on living plants” at the old Kunstgewerbemuseum in the Gropius Building, then at the Berliner Vereinigten Staatsschulen, the present Hochschule der Kunste. He achieved photo-historical fame somewhat innocently and almost unknowingly; for it was not until 1928, shortly before the end of his life, that his *Urformen der Kunst* appeared. Published with primarily didactic rather than artistic intentions by the Wasmuth Verlag in Berlin, the book made him famous overnight. Blossfeldt surely could not have believed his eyes as he read the reviews.

Chapter 2 TEACHING

As a sculptor and university teacher, he first taught “modeling based on living plants” at the old Kunstgewerbemuseum in the Gropius Building, then at the Berliner Vereinigten Staatsschulen, the present Hochschule der Kunste. He achieved photo-historical fame somewhat innocently and almost unknowingly; for it was not until 1928, shortly before the end of his life, that his *Urformen der Kunst* appeared. Published with primarily didactic rather than artistic intentions by the Wasmuth Verlag in Berlin, the book made him famous overnight. Blossfeldt surely could not have believed his eyes as he read the reviews.

It is indeed true that Blossfeldt demonstrated little interest in root systems; and in accordance with the classical premises of his aesthetics and their origins in Meurer’s teaching materials, they could hardly have interested him. The amputation that Kubicki criticizes is therefore not an act of random pruning, but rather an aesthetic decision based on principle. Just as the

bestial aspect of vegetal functions remains secondary to him, the chaotic subterranean life of tubers is no subject for his photos. It is practically impossible to stylize it.

Rooted in Structure

It is indeed true that Blossfeldt demonstrated little interest in root systems; and in accordance with the classical premises of his aesthetics and their origins in Meurer's teaching materials, they could hardly have interested him. The amputation that Kubicki criticizes is therefore not an act of random pruning, but rather an aesthetic decision based on principle. Just as the bestial aspect of vegetal functions remains secondary to him, the chaotic subterranean life of tubers is no subject for his photos. It is practically impossible to stylize it.

Every healthy manifestation of art requires a germinative impulse: only from nature's eternally flowing fountain of youth, from which the peoples of all ages have drawn, can art once again receive new energy and inspiration for healthy development. Blossfeldt's structural plants must not have seemed adequately rooted in this soil.

With this idealistic premise, the "new way of seeing" braces itself against the experience of subjective impotence in the face of the technical and as is increasingly the case in our century, ideological powers that are so overwhelming. It is feared that the things themselves cannot be changed; relief, and above all consolation, must therefore be sought in a change of perception:

Our eye need only become a bit sharper, our ear a bit more receptive; we need to take in the taste of a piece of fruit more fully; we should be able to tolerate more odors and become more conscious and less forgetful when touching and being touched—in order to draw consolation from our immediate experiences which would be more convincing, more paramount, and truer than all the suffering that could ever torment us.

The decisive factor is to be found elsewhere however. Everything is dependent upon the viewer, not the object viewed. Just how threatening things appear depends upon the capacity and suitability of his optics.
